The successor to AutoCAD is AutoCAD LT, released in 2007. AutoCAD LT was also the first CAD application to run on mobile and tablet devices. Adobe released an AutoCAD alternative for Windows, the Adobe Creative Suite, in 1998. In August 2015, Adobe announced that it was discontinuing support for Creative Suite, with the last release (CS4) ceasing sales on January 27, 2016. After January 2016, customers who had already bought the last of their remaining CS4 products had until February 2016 to upgrade to a newer version. However, if the individual customer chose to upgrade then a payment of \$499 was required. Adobe states that the same functionality of the Creative Suite can be acquired with the free use of the Adobe Creative Cloud (paid subscription) service. In August 2016, Adobe released an updated version of the Adobe Creative Cloud mobile app. A new web design application, Adobe Edge Reflow, was also released by Adobe in May 2017. In 2017, Autodesk introduced CAD360, a new cloud-based service, which will allow customers to access all the same capabilities of AutoCAD as well as other AutoCAD apps through an online portal. Adobe has also announced that their Adobe Illustrator app will also be released as a service. This will be similar to the new service of Autodesk. Other CAD programs include: SolidWorks from Dassault Systèmes, which is mostly geared toward the manufacturing industry but is widely used in other industries SketchUp from Google, an open-source parametric 3D modeling and presentation application developed by Google and released under the GPL 3.0 license SketchUp 360, a free version of SketchUp that only supports the free Google Earth and Google Maps APIs, not the Google Drive API. 3D Studio Max from Autodesk, a parametric 3D modeling and animation tool (formerly Maya), which can also import and export.MAX files (its own format). Maya LT, a free version of Maya LT that only supports the free Google Earth and Google Maps APIs, not the Google Drive API. CADDblender, a cross-platform application for 3D modeling, animation, rendering, and design Smooth3D, a product of Marc Dorcel company which has been commercialized by Open Design Systems since 2005, which is a free viewer application for 2

Q: Unit Test in Visual Studio 2010 - Assert.AreEqual() Not Working I have a.cs file with some custom validation rules. One of those rules looks for a certain key inside a dictionary. I have a unit test written to test the validation rules, but the assert does not seem to be working. Here is the code: public Dictionary PasswordRules { get; set; } public object ValidatePassword(object pwd) { if (pwd == null) { return null; } if (pwd.ToString() != PasswordRules[pwd.ToString()]) { throw new ArgumentException("Password is not valid."); } return pwd; } and here is the test method: [TestMethod] public void ValidatePasswordReturnsNullForNullPassword() { var objectToTest = new object(); objectToTest.Password = null; var result = Service.ValidatePassword(objectToTest); Assert.IsNull(result, "The result should be null because the password is null."); } I've tried using [TestMethod] on the test method, but it's not picking it up. I've tried looking at other examples online, but I can't get them to work either. What am I doing wrong? Thank you. A: You are looking for IsNullOrEmpty() instead of AreEqual(). If you compare null to null, you get null. Null is not equal to anything. So the assertion fails. If you compare null to an empty string, you get an empty string, which is equal to the empty string (""). AreEqual will never fail for this. However, if you compare null to a string with any length, you get the full string "null". AreEqual will fail because the strings are not equal. Q: Possible to embed a C++ file in the
