A photo of the "Trumpocalypse" mural in New York City went viral on Twitter over the weekend, and it's no wonder why. The art piece – a huge fluorescent pink and orange piece of work set to the soundtrack of "The Hunger Games" – depicts a woman being flipped off, with the giant hand seemingly threatening to touch her face. "HE'S DONE IT!" one person wrote, and the only thing that is sure at this point in this fictitious world is that Trump has indeed won the presidency. The mural by Italian street artist David de la Cruz, which is currently on display in the East Village, has already made its way to the internet, and many have been quick to point out how accurate the art piece really is. With so much at stake in 2016, that – combined with the human desire to click "share" on any and all images – it's no surprise that this one has gained so much traction online. Sure enough, at last check, de la Cruz's Facebook page was down, but it hasn't stopped people from weighing in on the topic. Not all are anti-Trump. Many, however, are simply proud of the work by de la Cruz. To add another layer of depth to the brilliant and fairly accurate work, de la Cruz has also included a quote from the "The Hunger Games" line in the piece. "Kill yourself," says Katniss, and that is something we might all want to think about as the year comes to an end. While we're not sure if this mural was painted for the election, we are pretty sure that it was done in time. Waking up to this piece of art might have you feeling sleepy. Just ask yourself: How did we get here? What's about to happen? Follow @Adrianna_

Thus, by the Schauder's Fixed Point Theorem, we can conclude the existence of a fixed point. To finish the proof of the theorem, we need to show that the equation $x = F(x)$ has a unique solution. Let $\omega \in C_0^{\infty}(\overline{Q})$ be a function that has non-negative values on the compact set $[0,1]^n \times [0,1]^n$ and whose integral with respect to y in Q is equal to 1. We denote the function $\omega \in L^1(\overline{Q})$ by ω^*. The total variation of the function T with respect to the function ω^* is bounded by the value $2 {\operatorname{Re}}F$. Therefore, it is enough to show that $\omega^* \in {\operatornamewithlimits{dom}}T$ to finish the proof. We note that ${\operatornamewithlimits{supp}}\omega^* \subset [0,1]^n \times [0,1]^n$. By the Hahn-Banach Theorem and by the fact that ${\operatornamewithlimits{supp}}\omega^* \subset [0,1]^n \times [0,1]^n$, we can find a $v^* \in L^1_{\infty}(\overline{Q})$ such that $v^* \in L^1_{\infty}(\overline{Q})$, ${\operat e79caf774b

Editor's Note: This article appeared in the May/June 2013 issue of American Forests magazine. Reprinted here with permission. Chase Hollenback is the premier environmental journalist in the Great Plains. In 1999, after a career in environmental journalism at The New York Times, Nebraska Public Radio, and the Omaha World-Herald, he was named editor-in-chief of Plains magazine. Plains is the only publication covering the Great Plains region that is owned by, and owned by, its readers. Its core themes are promoting and educating people about the region's natural heritage, and helping restore ecosystems, all of which directly affect the quality of life for people and animals. Since assuming the editorship, Hollenback has succeeded in meeting the magazine's mission, first by bringing a level of professionalism to the publication and second by developing a robust web site, theprairie.org, that attracts millions of visitors, making it one of the region's most visited websites. According to the University of Nebraska Center for Environmental Journalism, Hollenback's review pages have had the highest readership of any natural resource or environmental site. Plains has become a major institution, influencing regional policy and influencing public perceptions of the Great Plains. It features stories that connect with readers on a number of levels. Many of them are personal stories that address subjects such as Native American Tribes or the national debate about the management of public lands. Many of them are about the great outdoors — hunting, fishing and hunting-fishing, and conservation — but several are about the future of the Great Plains. All of that is why in November 2012, Hollenback was honored by the American Forests Foundation with its highest award, the 2012 John Muir Award for Environmental Journalism. Hollenback is a versatile, enthusiastic, imaginative, and courageous journalist who routinely plunges into thorny issues and engages the public in conversations about the "big issues" of our time: climate change, public lands management, the future of the Great Plains, the Great Lakes, and the changing face of the U.S. Editor's note: This interview was conducted in Omaha in late June. For more detailed information about Chase Hollenback's career, his achievements, and his vision for the future of the prairies, see his bio page at www.www.forestry.org/about/jobs/Pages/chase
